EBS Premieres New Generation in Computer Classroom Projection

Wednesday October 9, 7:45 am ET

ENGLEWOOD, Fla., Oct. 9 /PRNewswire/ -- Computer classroom instructors who want more control over their students' use of computers as well as better learning efficiency will welcome the premiere of Videodidact-Show, the newest product from Educational & Business Systems (EBS) of Englewood, Florida.

Traditional projectors are based on enlargement. In doing so, the brilliance and sharpness of the enlarged image is compromised. Small icons and text become harder to read. Factors like lighting and student placement exacerbate this imperfect system. EBS solves this problem with an affordable solution. Rather than enlarge the image, Videodidact-Show enables a computer instructor to send the same image on their screen directly to every students' computer in the classroom.

EBS vice president Wolfgang Beaugrand says, "Computer use in classrooms today has become standard procedure and our newest system upgrades and enhances the computer learning experience. As a result, the teacher's efficiency is greatly increased and the students' learning curve is accelerated."

Videodidact-Show is a highly efficient system that replaces the need for ordinary projectors by transferring computer images from the instructor's screen to the student's screen, eliminating the problems of resolution and clarity caused by all projectors. Videodidact-Show sends the instructor's image directly onto the student's monitor with a higher resolution and brilliance level than is possible by using a projector. The student's learning experience is improved because there is no object in between their line of vision and it is easier to increase and capture student attention.

Likewise, Videodidact-Show can prevent the student's computer from being used for purposes other than the classroom lesson at hand, as the instructor has the ability to lock out all screens. This prevents students from surfing the Internet, playing games, or participating in other types of computer diversions while the instructor sends an image to the student's computer. In addition, the instructor has the ability to blank out all screens at any time, allowing him to lecture with the students' full attention.

Manufactured by EBS International in Germany, Videodidact-Show is the latest groundbreaking product in classroom computer management from Educational & Business Systems, which has been providing computer training management solutions since 1987. Videodidact-Show is comparably priced to most traditional projection systems.

The company also offers the popular computer classroom management system called Videodidact-Select that allows an instructor to control all computers from a central keypad. Videodidact-Select is already in use in classrooms worldwide and at American universities and schools in over 18 states.
