

LINK-UP YOUR LEARNING PLATFORM TO CLASSROOM TEACHING!

SANAKO Study Blackboard Module is a unique plug-in for SANAKO Study software. It allows teachers and learners to instantly use Blackboard course materials in live, teacher-led learning situations, as well as in the asynchronous Blackboard Learning System™. Using Blackboard materials in interactive teaching enhances the value of self-paced and teacher-led learning by providing a closer link between both approaches. The Study Blackboard Module can be used with both SANAKO Study 500 and SANAKO Study 1200.

The Interactive SANAKO Study environment combined with Blackboard's content management possibilities make teaching and learning more effective.

Completing Blackboard Learning System™ with interactive SANAKO Study environment

It is now possible to enhance the Learning System™ with the interactive SANAKO Study learning environment, which offers excellent communication and feedback resources that make teaching more effective for teachers and learning more motivating for students.

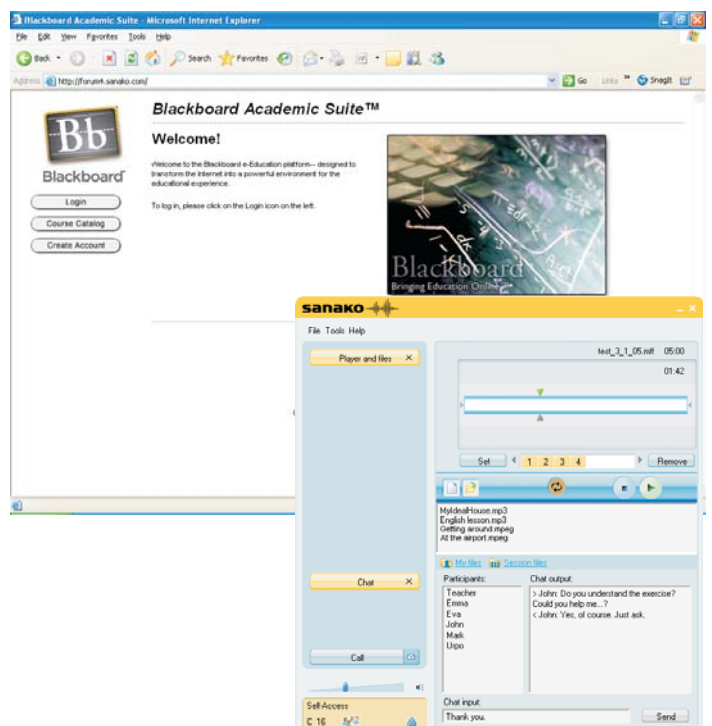

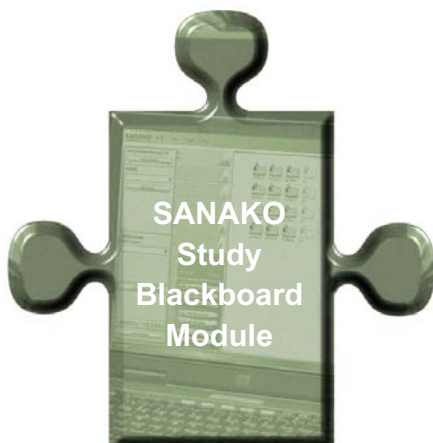

New dimension to managing learning content

The Study Blackboard Module provides teachers with instant access to the Blackboard Learning System™. By selecting this access point, the teacher opens a connection in the Blackboard server*, which allows him or her to download files into the SANAKO Study file area for use in live classroom teaching.

* Blackboard module works with Microsoft® Windows® server.

Teacher-led collaboration and individual learning

The Blackboard system allows teachers to easily and effortlessly transfer learning materials to the interactive Study environment for teacher-led, collaborative learning. Additionally, with the help of the Learning System™, teachers and students can get maximum benefit from learning materials by being able to work with them independently.

In the SANAKO Study learning environment students can collaborate efficiently by using materials shared by the teacher from Blackboard.

Quick download and distribution of files

SANAKO Blackboard module has an easy-to-use interface for teachers, providing them with the familiar browse functions when searching for files. The teacher simply logs on to the server and selects material for the students to work with in the interactive Study learning environment. With Blackboard, there is no need for multiple downloads of the same material for each user.

Minimum demand on server

When the teacher accesses Blackboard course materials from the SANAKO Study software to launch to students, it takes less time than if students were to access their individual Blackboard accounts to download the required material. The teacher is the only one logging on to the server, which considerably reduces the demand on the Blackboard server and/or school's Internet connection.

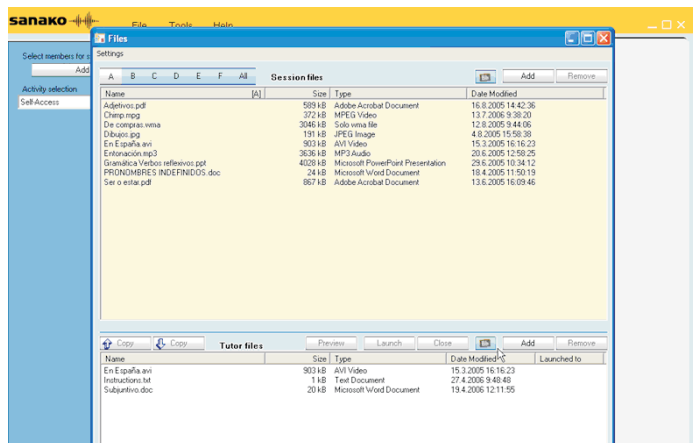

Smoothly flowing lessons

The Study Blackboard module helps teachers to get the lesson started without wasting time searching for teaching resources. The teacher can be sure that all students get the same material at the same time without each student having to download the requested file. Valuable teaching time can be spent efficiently and the students can focus on learning.

Blackboard Building BlocksSM program

Blackboard Building BlocksSM is Blackboard's open architecture initiative that allows clients to enhance the online education experience for their teachers and learners by integrating technology from Building BlocksSM partners such as SANAKO. The flexibility of Blackboard's open architecture allows clients to assemble a solution comprised of the open source and commercial software tools that best meet their specific needs. The Building BlocksSM catalog itself is a source for clients to access and find out about the latest and greatest Building BlocksSM.

High Technology from Finland

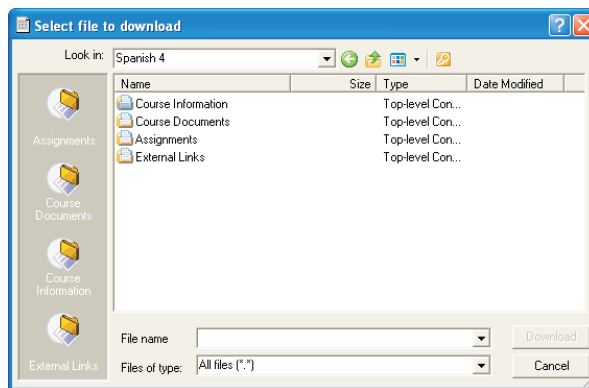

SANAKO Study offers teacher an intuitive interface that makes sharing of teaching content simple.

Access to learning resources at any time!

When using the Study Blackboard module, teachers can instantly download Blackboard learning resources at anytime either before or during a lesson and instantly launch to individuals, groups or the whole class. For example, in a classroom in a classroom session, the teacher can first download a Blackboard resource to the multifunctional Study environment and run through the material for the class from her Study interface. After the demonstration, the teacher can launch the same material to the students to work on individually.

Opportunities for practicing after the lesson

In addition to collaboration in the classroom, students can continue practicing with the lesson material independently. Once the teacher has made material available for students through Blackboard module, the students can access the lesson content individually for self-paced learning.
